

CRDAXML - Create XML RDA for Magnet

This CRDA format will output RDA in the XML format (extensible markup language). XML is basically HTML with a lot of additional formatting tags.

The program prompts for the off-sale date range. Enter the appropriate date range as indicated by Magnet. If no dates are entered, the default is FROM = system date -180 days and TO = system date.

Answer 'Y' to the 'Do you want to continue Y/N' prompt to create the XML format RDA files.

CRDAXML - CREATE XML RDA FOR MAGNET

ENTER FROM DATE: / / TO DATE: / /
DO YOU WANT TO CONTINUE WITH RDA(Y/N)? : Y

The output files are put into the /u/dps/mag/export/data directory. The program creates 3 different output files: 'T' title files, 'O' O/R data files, and 'D' Dealer data files.

The files are named by using a company prefix + a data ID + a date stamp + an extension + a suffix number. For example, TAO061227.XML00 would be a client 165 O/R data file.

Company prefix (2 digits) - SM = Client 101, WN = Client 110, TA = Client 165, TG = Client 168, TS = Client 193, TR = Client 195

Data id (1 digits) - T = title data, O = O/R data, D = dealer data

Date stamp - CCMMDD

Extension - .XML

Suffix - 00, 01, 02, 03, etc.
