

570 - Import Chain Draws

This program is used to import base and freeze information for a title by retailer. When EOD is run, the EOD7 - O/R Maintenance Report will print the old and new base updates from the import.

This program reads from a fixed length file placed in the `/u/dps/mag/import` directory. This code adds/changes the base and freeze in the O/R file. The file to be imported can be named anything.

The freeze for adds will use whatever is in the import file.

The option to "PRINT REPORT ONLY (N/Y)", allows you to run the program without updating the O/R file. This helps you to find and correct errors with the import file.

PRINT REPORT ONLY = Y, prints a report of what will be processed and any errors found in the import file. DOES NOT UPDATE.

PRINT REPORT ONLY = N, processes the import file, UPDATES O/R, and prints reports detailing what was processed and errors found in the import file.

File Type - Retailer number:

Column #	Position	Length
Retailer #	1-14	14
Title #	15 - 19	5
Base	20 - 26	7
Freeze	27	1

Excerpt from a Retailer number type file:
